Exit System

Powerful Payment Processing

- Accept Unlimited Payments of Cash, Check, Credit Cards and House Charges, Credits, Voids
- Handles Manufacturer or Company Coupons
- Handles Multiple Payment Types for Each Sale
- Complete Control of Overpayment and Change
- Optional ID check for checks or credit cards over a user specified amount
- Control cash drawer opening on tender process
- User Definable Receipt Format without Programming
- Optional PC-Charge interface automates credit card processing

Administrative System is controlled by an easy-to-use menu system which lets the administrator select all setup, security, reconciliation, register and cashier tracking, bar code printing, sales analysis, and all reporting. Each workstation can be setup as a cashier station which only displays the Point of Sale screen with a cashier login or the full administrative station with the menu system.

Reconcile Your Sales, Registers, and Cashiers

Back Office Reconciliation Just Got Easy!

Display each cashier session and view the register, cash drawer, cashier, time in/out, and all cash balances.

- Verify and edit Starting Cash, display cash sales, count ending cash, analyze differences, and change the status when reconciled
- Change the Register Status when Reconciled
- Use the integrated cash counter to count cash, checks, or coupons
- Display only desired data filtered by register, cashier, date/time, unreconciled amount, status
- Sort the data by any column
- Reports let you keep statistics on sales by register or cashier including efficiency measurements

Count Cash, Checks, and Coupons

Cash Counter lets you define and maintain all cash types.

- Include checks, coupons and any custom payment types
- Check Counter allows entry of check number, bank routing info, and check amount
- Coupon Counter allows entry of bar code, manufacturer, and amount. Optionally scan coupon's bar code
- Define each type of cash to count including the multiplier
- Separate counters for cash, checks, and coupons
- Automatically retrieve checks and coupons from sales system
- Posts to reconciliation screen when counts are completed
- Save count data for later analysis and editing
- Print all counts and totals

Print Bar Codes on all Your Items

- Displays all of the products in your inventory
- Select any bar code font family and specific font
- Print item labels, price labels, serial number labels for registers
- Select which items to print bar codes for
- Print 1, quantity in stock, or any custom number of labels
- Optionally print description, bar code text, price, and serial number under bar codes
- Print combination labels of bar code/price
- Define your own label types

Item Number	Qty to Prt	Qty In Stk	Bar Code	Description
☒ AD-0017	21	212		Adventures of the Lost Computer # 1-5

Great Tools to Analyze Your Sales

Sales Analyzer Form Displays Every Transaction

- View all transactions in one form
- Drill down through cashier sessions, invoices, line items, and payments
- Filter for date, registers, cashiers, status, and sort by any column
- Display each register log entry
- View all invoices created
- View line items and payments for each invoice
- Double click on any invoice and see invoice in form view
- Print any or all selected data

Powerful Report Manager Included

- Easy to Use Report Selection Screen
- Enter Up to Two Optional Report Titles
- Select Reports by Category and See Complete Description
- Select Any Period - Day, Week, Month, Quarter, Year, or define any Custom period
- Define additional selections without programming
- Many pre-defined reports included
 - Sales reports
 - Cashier reconciliation reports
 - Register efficiency reports
 - Statistical analysis reports

Post All Data to Yes! I Can or Other Accounting Systems

- Designed to work with *Business!* Accounting Software
- Can be customized to integrate with other Access based accounting systems
- Post all sales and payment transactions directly to General Ledger
- Works with Accounting, Sales, Accounts Receivable, Customer, and Inventory systems
- Create invoices directly in *Business!* for sales and receivables analysis

Complete Control Over Point of Sale Operations

Control Inventory and Bar Code Scanning Options

- Well organized setup options make it easy to control your POS system
- Customize to the way you run your business
- Handles inventory, bar code, sales tax, general ledger, invoicing options, and more
- Control how you use bar codes or item numbers to enter or scan SKUs
- Handle inventory lookups or out of stock conditions. Override zero quantities
- Local options include workstation type (administrative or cashier) and register

All POS Hardware is Treated as Optional

- Select your point of sale hardware, choose and test the connection port
- Supported hardware includes scanners, cash drawers, light poles and receipt printers
- Select from several pre-defined light pole message formats or create your own
- Define all text on top and bottom of receipts including any credit card signature lines
- Select order of fields on receipt including size and format from user-friendly interface

Other setup options define look of cash counter, general ledger accounts, payment type processing, and cashier security. Local options define register security separate from cashier security. Utility options include daily back-up and multi-company options.

Point of Sale/Barcode Hardware & Accessories

Supports most common Point of Sale hardware from major vendors. Purchase directly from Database Creations, Inc. at great prices. Hardware/software works with any personal computer system that runs Microsoft Access 97 or higher. Each register workstation requires software license and hardware to operate.

Hardware Bundle	List Price

Scanner (Symbol LS 1000)	\$595
Thermal Receipt Printer (Epson)	\$561
Any 1 Bar Code Font	\$149

Bundle Price Only: **\$1,595** Regular: \$2,245

Also Available Warehouse Inventory System

Barcode Tracking and Printing for *Business!* Accounting Software

Processing Option Choices Control System

- Warehouse system handles physical inventory reconciliations, loading dock transactions, or transfers between warehouses using portable data collectors
- Total Inventory data (reconciliation) can be automatically processed within desired tolerances for shortages and overages separately
- Summarize or show all detail for transaction data
- Specify an inventory date which can be used to automatically enter the last date reconciled
- Optional general ledger accounts can be used for entries for reconciliation differences and transaction amounts using quantities and prices
- All settings are saved each time so you only have to select the specific settings you need
- Works with standard bar code hardware
- Use portable data collection devices to collect data
- Includes source code
